

Wamu Uganda — Demo Specification v1.0

Purpose: A buildable, screen-by-screen specification for the fundable demo.

Audience: Solo developer building the demo in 6–10 weeks.

Philosophy: The demo must feel like nothing that exists in Uganda today. Not Jumia. Not WhatsApp. Not TikTok. Not SafeBoda. All four, in one app, with a shared soul.

Version: 1.0

Date: 2026-09-27

1. Demo Purpose & Success Criteria

1.1 What the Demo Must Prove (in 10 minutes)

1. **Discovery is social** — short video feed of local businesses, not a product grid.
2. **Commerce is conversational** — chat is the store, not a cart.
3. **Payment is local** — MTN MoMo and Airtel Money, mocked but shown end to end.
4. **Delivery is personal** — a named, verified rider with a face, rating, and history.
5. **The rider network is shared** — the same rider does delivery and rides.
6. **One account, many roles** — a customer can become a rider, a merchant can become a customer.

1.2 Success Criteria

Criterion	Target
Demo length	10 minutes live, 3 minutes video
Screens shown	14–18 screens across 3 apps
"Wow" moments	At least 3 (video feed, chat ordering, rider switch)
Investor reaction	"This is not Jumia"
Technical stability	No crashes during a 10-minute walkthrough

1.3 What the Demo Does NOT Need

- Real MTN MoMo / Airtel Money integration
- Real SMS OTP
- App store submission
- Production security hardening
- ML recommendations
- Merchant settlement and payouts
- Groups, communities, status
- Voice/video calls
- Passenger transport beyond a toggle and one ride
- Multi-city support

Cut everything on this list. Every hour on it is an hour stolen from the demo.

2. The Demo Story (Narrative)

The demo follows one customer, one merchant, and one rider through a complete loop. The presenter narrates.

Characters (Seeded)

Role	Name	Details
Customer	Sarah	28, works in Ntinda, orders lunch daily
Merchant	Mama Grace	Food stall in Kamwokya, sells fresh tilapia and matoke
Rider	Ronald	32, boda rider, 340 deliveries, 120 rides, 4.8 rating

The Story

Sarah opens Wamu at lunch. She scrolls the video feed and sees Mama Grace cooking fresh tilapia today. She taps the video, opens a chat, asks if tilapia is available, negotiates a price, and places an order. She pays with MTN MoMo. Ronald, a verified rider she has used before, picks up the order and delivers it. Sarah rates both. Then Sarah needs to go to town. She opens Wamu Move. Ronald is still available. She requests a ride. Same rider, same app, same account.

Every screen in the demo serves this story.

3. Screen-by-Screen Specification

3.1 Customer App

Screen C1: Splash & Onboarding

Purpose: First impression. Show the ecosystem.

- Wamu logo (green, clean)
- Tagline: "Discover. Chat. Buy. Deliver. Ride."
- Three value cards: "Watch local businesses" / "Chat and order instantly" / "Delivered by verified riders"
- "Get Started" button

Tap → Phone number screen.

Screen C2: Phone Login

Purpose: Show Uganda-first auth.

- Phone number input (+256 prefix)
- "Send Code" button
- "By continuing you agree to Wamu's Terms"

Tap → OTP screen.

Screen C3: OTP Verification

- 6-digit OTP input
- Auto-read from SMS (or manual for demo)
- "Verify" button
- Resend timer

Demo note: Use a fixed OTP (123456) for the demo. Real SMS later.

Tap → Profile setup.

Screen C4: Profile Setup

Purpose: Show one-account-many-roles model.

- Name input: "Sarah"
- Profile photo (optional)
- Location permission: "Allow Wamu to find businesses near you"
- **Capability toggles:** "I want to buy" (ON), "I own a business" (OFF), "I want to ride" (OFF)
- "Continue" button

Demo note: Sarah keeps only "I want to buy" ON. Later, the presenter can toggle "I want to ride" to show the same account becoming a rider.

Tap → Discover feed.

Screen C5: Discover Feed (WOW MOMENT #1)

Purpose: Replace Jumia's product grid with a TikTok-style local business feed.

- Full-screen vertical video (Mama Grace cooking tilapia)
- Overlay bottom-left: Business name "Mama Grace Kitchen", verified badge, "1.2 km away", rating 4.9 ★ (212 reviews)
- Overlay bottom-right: Like, Comment, Share, Save
- Overlay bottom-center: **"Chat to Order"** (primary CTA — not "Buy") and "Follow"
- Top-right: Search icon, Profile icon
- Swipe up for next video

Demo note: "This is not a product grid. This is what your neighborhood looks like today."

Tap **"Chat to Order"** → Chat screen.

Screen C6: Business Chat (WOW MOMENT #2)

Purpose: Replace cart/checkout with conversation.

- Top bar: Mama Grace's photo, "Mama Grace Kitchen", verified badge, "Online" indicator
- Message thread:
 - Sarah: "Hi Mama Grace, do you have tilapia today?"
 - Mama Grace: "Yes! Fresh from the lake this morning. 15k each."
 - Sarah: "Can you do 2 for 25k?"
 - Mama Grace: "Yes, for you."
 - Sarah: "Send to my office at Ntinda."
 - Mama Grace: [sends an order card]
- Order card: 2× Fresh Tilapia — 25,000 UGX, Delivery to Ntinda, ETA 35 min, "Pay Now" button
- Bottom bar: text input, camera, voice note, attach

Demo note: "There is no cart. There is no checkout page. The order happens in the conversation."

Tap "Pay Now" → Payment screen.

Screen C7: Payment

Purpose: Show Uganda-first payment.

- Order summary
- Payment methods: MTN Mobile Money (selected), Airtel Money, Cash on Delivery
- Amount: 25,000 UGX + 3,000 delivery = 28,000 UGX
- "Pay with MTN MoMo" button

Tap → MoMo confirmation simulation.

Screen C8: MoMo Confirmation (Mocked)

- "Check your phone for the MoMo prompt"
- Simulated notification: "Wamu is requesting 28,000 UGX. Enter PIN to confirm."
- Loading spinner
- "Payment Confirmed" (simulated webhook)
- Order state: CONFIRMED

Demo note: "We are integrated with MTN MoMo and Airtel Money. This is the same flow your customers already know."

Tap → Order tracking screen.

Screen C9: Order Tracking (WOW MOMENT #3)

Purpose: Show a named, verified rider — not an anonymous delivery.

- Map with Mama Grace's location, Sarah's location, and Ronald's moving marker
- Rider card: Ronald's photo, "Ronald K." + verified badge, 4.8 ★ · 340 deliveries · 120 rides, "Wamu Rider #R-2841", Call button, Chat button
- ETA: "12 minutes away"
- Order state timeline:  Confirmed ·  Preparing ·  Picked up ·  In transit ·  Delivered

Demo note: "This is Ronald. He has a name. He has a face. He has a history. He did 340 deliveries and 120 rides last month. This is not a warehouse. This is your neighborhood."

Screen C10: Rating

- "How was your order?"
- Rate Mama Grace: 5 stars
- Rate Ronald: 5 stars
- Optional comment
- "Submit" button

Tap → Back to Discover feed.

Screen C11: Wamu Move — Ride Request

Purpose: Show the shared rider network.

- Map with pickup and destination input
- Destination: "Kampala Road"
- Fare estimate: 8,000 UGX
- "Request Ride" button

Tap → Rider matching.

Screen C12: Rider Match — Ronald Again (FINAL WOW)

Purpose: The moment the investor leans forward.

- "Matching you with a rider..."
- Ronald's card: "Ronald K. is 2 minutes away", same verified badge, same rating, same history
- Note: "Ronald also does deliveries on Wamu"
- "Ronald is on his way" + live map
- Trip state: `ACCEPTED` → `EN_ROUTE_PICKUP`

Demo note: "Ronald just delivered Sarah's lunch. Now he is taking her to town. Same rider. Same app. Same account. This is the shared rider network. No other app in Uganda does this."

3.2 Merchant App (Same Flutter App, Merchant Role)

Screen M1: Merchant Dashboard

- "Welcome, Mama Grace"
- Today's stats: Orders: 14 · Revenue: 210,000 UGX · Rating: 4.9 ★
- Quick actions: "Post a Video", "View Orders", "Chat with Customers"

Screen M2: Incoming Order

- Order card from Sarah: 2× Fresh Tilapia — 25,000 UGX, Delivery to Ntinda, Customer: Sarah
- "Accept" / "Reject" buttons

Tap **"Accept"** → Order state `CONFIRMED` .

Screen M3: Order Preparation

- Order details
- "Mark as Ready" button
- Chat with Sarah (inline)

Tap **"Mark as Ready"** → Order state `READY` . Backend dispatches rider.

Screen M4: Post a Video

- Camera / upload
- Caption: "Fresh tilapia today!"
- Tags: Food, Kamwokya, Tilapia
- "Post" button

Demo note: Show that this video appears in the customer's Discover feed immediately.

3.3 Rider App (Same Flutter App, Rider Role)

Screen R1: Rider Dashboard

- "Welcome, Ronald"
- Availability toggles: **Available for Delivery** (ON), **Available for Rides** (ON)
- Today's stats: Deliveries: 8 · Rides: 3 · Earnings: 42,000 UGX
- Verification badge: "Verified Rider"

Demo note: The toggle is the key. One rider, two service types.

Screen R2: Incoming Delivery Request

- Pickup: Mama Grace Kitchen (1.2 km)
- Dropoff: Ntinda (3.5 km)
- Estimated earnings: 3,000 UGX
- "Accept" / "Decline"

Tap "Accept" → State `ACCEPTED` .

Screen R3: Navigation to Pickup

- Map with route
- Turn-by-turn (simple)
- "Arrived at Pickup" button

Tap → State `AT_PICKUP` .

Screen R4: Pickup Confirmation

- Order details
- "Confirm Pickup" button

Tap → State `PICKED_UP` → `IN_TRANSIT` .

Screen R5: Navigation to Dropoff

- Map with route
- Customer chat button
- "Arrived at Dropoff" button

Tap → State `NEAR_DESTINATION` .

Screen R6: Delivery Complete

- "Confirm Delivery" button
- Optional: photo proof
- Earnings updated: +3,000 UGX

Tap → State DELIVERED .

Screen R7: Incoming Ride Request (SHARED NETWORK)

- Pickup: Sarah's current location (1.5 km)
- Dropoff: Kampala Road (4.2 km)
- Estimated earnings: 8,000 UGX
- "Accept" / "Decline"

Tap "Accept" → Ride state ACCEPTED .

Demo note: Same rider, different service type. This is the shared network.

3.4 Admin Panel (Web)

Screen A1: Dashboard

- Total users, merchants, riders
- Orders today, Deliveries today, Rides today
- Revenue
- Active riders on map

Screen A2: Merchant Verification

- List of pending merchants
- Verify / Reject buttons

Screen A3: Rider Verification

- List of pending riders
- View ID, selfie, vehicle, plate
- Approve / Reject

Screen A4: Order Monitoring

- Live order list
- Filters: status, city, merchant
- Click to see details

4. Data Model for the Demo

4.1 Seed Data

Entity	Count	Examples
Users	5	Sarah, Mama Grace, Ronald, +2
Businesses	3	Mama Grace Kitchen, Kato Electronics, Amina Salon
Products	9	3 per business
Videos	6	2 per business
Riders	2	Ronald, +1
Orders	3	Various states
Rides	1	Completed

4.2 Demo Database Tables (Minimal)

- users
- businesses
- products
- videos
- conversations
- messages
- orders
- order_items
- payments
- riders
- deliveries
- rides
- ratings

5. Backend Endpoints for the Demo

5.1 Auth

- POST /api/v1/auth/request-otp
- POST /api/v1/auth/verify-otp
- GET /api/v1/auth/me

5.2 Discover

- GET /api/v1/discover/videos
- POST /api/v1/videos/{id}/like
- POST /api/v1/videos/{id}/follow

5.3 Chat

- GET /api/v1/conversations
- GET /api/v1/conversations/{id}/messages
- POST /api/v1/conversations/{id}/messages

5.4 Orders

```
POST /api/v1/orders
GET /api/v1/orders/{id}
POST /api/v1/orders/{id}/accept
POST /api/v1/orders/{id}/ready
```

5.5 Payments (Mocked)

```
POST /api/v1/payments
POST /api/v1/payments/webhook (simulated)
```

5.6 Delivery

```
POST /api/v1/deliveries
POST /api/v1/deliveries/{id}/accept
POST /api/v1/deliveries/{id}/pickup
POST /api/v1/deliveries/{id}/complete
```

5.7 Rides

```
POST /api/v1/rides
POST /api/v1/rides/{id}/accept
POST /api/v1/rides/{id}/start
POST /api/v1/rides/{id}/complete
```

5.8 Rider

```
GET /api/v1/riders/me
PATCH /api/v1/riders/availability
```

6. What Is Real vs Mocked

Feature	Real or Mocked	Notes
Auth (OTP)	Mocked	Fixed OTP 123456 for demo
Video feed	Real	Seeded videos, real playback
Chat	Real	WebSocket or polling
Order flow	Real	Full state machine
Payment	Mocked	Simulated MoMo webhook
Maps	Real	Google Maps free tier
Rider tracking	Real	Simulated GPS updates every 3 sec
Ride flow	Real	Same as delivery, different state machine
Push notifications	Mocked	In-app banners
SMS	Mocked	No real SMS for demo
Merchant settlement	Not built	Out of scope
ML recommendations	Not built	Simple ranking for feed

7. Build Order (6 Weeks)

Week 1: Foundation

- Project setup (Flutter + FastAPI + PostgreSQL)
- Database schema
- Auth endpoints + screens (C1–C4)
- Seed data script

Week 2: Discover

- Video feed screen (C5)
- Video upload (M4)
- Like, follow endpoints

Week 3: Chat & Orders

- Chat screen (C6)
- Order card
- Order state machine
- Merchant order screens (M1–M3)

Week 4: Payment & Delivery

- Payment screen (C7–C8)
- Delivery state machine
- Rider screens (R1–R6)
- Order tracking (C9)

Week 5: Rides & Polish

- Ride request (C11–C12)
- Rider ride screens (R7)
- Ratings (C10)
- Admin panel (A1–A4)

Week 6: Demo Prep

- Seed data refinement
- Demo script rehearsal
- Bug fixes
- Record demo video
- Prepare pitch deck

8. Demo Script (10 Minutes)

Minute 0–1: Hook

"In Uganda, you use 4 apps to do what should take 1. WhatsApp to chat. TikTok to discover. SafeBoda to deliver. Your phone to pay. Wamu puts all of that in one app. Let me show you."

Minute 1–3: Discover

Show the video feed. Swipe through 2–3 businesses. "This is not a product grid. This is your neighborhood today."

Minute 3–5: Chat & Order

Open Mama Grace's video. Tap "Chat to Order." Show the conversation. Show the order card. "There is no cart. The conversation is the store."

Minute 5–6: Pay

Tap "Pay Now." Show MoMo flow. "This is the payment method Ugandans already use."

Minute 6–8: Delivery

Show Ronald on the map. "This is Ronald. He has a name, a face, and a history. He did 340 deliveries and 120 rides last month." Show tracking until delivered. Rate.

Minute 8–9: Ride (The Closer)

Open Wamu Move. Request a ride. Ronald accepts. "Ronald just delivered lunch. Now he is taking Sarah to town. Same rider. Same app. Same account. No other app in Uganda does this."

Minute 9–10: Close

"Jumia built a warehouse. We are building a neighborhood. Jumia uses cards. We use MoMo. Jumia ships in days. We deliver in minutes. Jumia is a company. Wamu is a community. We are not building another Jumia. We are building the app that replaces the 4 apps Ugandans already use every day."

9. Success Criteria (Revisited)

After the demo, the investor should be able to answer "yes" to:

1. Is this different from Jumia?
2. Does this feel like Uganda?
3. Does the rider network make sense?
4. Can this scale beyond Kampala?
5. Is the team capable?

6. Is the ask clear?

If any answer is "no," the demo failed.

10. What Comes After the Demo

If funding is secured:

1. Replace mocked payments with real MTN MoMo and Airtel Money integrations.
2. Add real OTP via SMS provider.
3. Add push notifications via FCM.
4. Harden security (encryption, audit logs, rate limiting).
5. Build merchant settlement and rider payouts.
6. Add admin tools for verification, disputes, refunds.
7. Launch in one Kampala neighborhood with 20 merchants, 50 riders.
8. Measure the loop — orders/day, repeat rate, delivery time.
9. Expand to more neighborhoods once the loop is stable.

11. Summary: What Changed From the Original Document

Original Document	Revised Demo Spec
MVP is commerce + delivery	MVP is discovery + chat + shared rider network
Video is Phase 3	Video is the home screen
Chat is Phase 2	Chat is the ordering interface
Rides are Year 2	Rides are in the demo
Catalog-first	Video-first
Cart and checkout	Chat and order cards
Anonymous delivery	Named verified rider
Separate services	One shared rider network
Looks like Jumia	Looks like nothing else in Uganda

The core message: *The demo is not a smaller version of the full product. The demo is a sharper version of the product's soul. It must lead with what makes Wamu different, not with what makes it familiar.*

Build the differentiators. Hide the rest. Win the room.

End of Demo Specification v1.0
